

Resilience to Future Flooding Short Films

bit.ly/Future-Flooding

This short film series, intended for community members and officials, has two categories:

Case Studies and Sea-Level Rise 101 films.

Case studies share stories of Gulf communities tackling sea-level rise resilience. They capture how small amounts of funding can be used to improve coastal resilience.

The SLR 101 films highlight what sea-level rise will look like in the northern Gulf, amplified storm surge, and how to plan for rising seas.

Local Sea-Level Rise Two-Pager

localSLR.org

Sea-level rise impacts communities across the country, but it isn't rising the same amount everywhere. This website has an interactive map where users pick their location and build a locally-relevant two pager. Data included are projected increase in mean sea level for six scenarios, current rate of sea-level rise at the location, days of future high-tide flooding associated with different scenarios, and more.

A printable version of the two-pager is available via the SLR Two Pager page on www.ngomssc.org.

Tools for Talking to ANYONE about Sea-Level Rise

This two-pager, intended for anyone who is interested in having conversations or engaging with others about climate change or sea-level rise resilience, includes best practices for communicating about climate change and its hazards in a constructive way and covers answers to common myths prevalent among skeptics.

The tool also includes additional resources focused on talking about climate change.

Climate Myths & Communication Two-Pager

This set of resources includes state-specific resource catalogs, two-pagers designed for specific audiences, and short, audience-specific films.

Resource catalogs include state-specific info on design & construction, permitting, costs, and case studies.

Two-pagers are available for consultants/engineers, contractors, property owners, realtors, & resource managers. The films discuss the benefits of both living shorelines and of various available resources.
